Drawings

The drawings are objected to because Figures 2, 7, 8, 9, and 10 have improperly presented cross sections. The cross sections must be labeled individually and a brief description for each figure included in the specification.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 22, 24-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Huber et al. (6059042) in view of Ackroyd et al. (6481498).

Huber et al. disclose a connection 10b for two downhole tools that are perforating guns but not compressing a sleeve with lugs, rotating one tool into threaded engagement with the other tool, or decompressing the sleeve to lock the tools.

Ackroyd et al. present compressing a sleeve 28 with lugs 40, rotating one tool into threaded engagement with the other tool, and decompressing the sleeve to lock the tools.

It would have been obvious to a person having ordinary skill in the art at the time the invention was made to connect the Huber et al. tools with the connection presented by Ackroyd et al. in order to withstand impact and provide ease of disconnection (Ackroyd et al., col. 1, lines 20-21).

Allowable Subject Matter

Claims 1, 3-21, and 31-33 are allowed.

Claim 23 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

Applicant's arguments, see page 8, filed 21 February 2006, with respect to the rejections of claims 1, 6, 16, 20, and 31 under 35 U.S.C. 103 have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new rejection is made in view of Ackroyd et al. The examiner contends the keyhole slot allows for compression/decompression.
